

PARAPET SHEAR PANEL (CORNER)

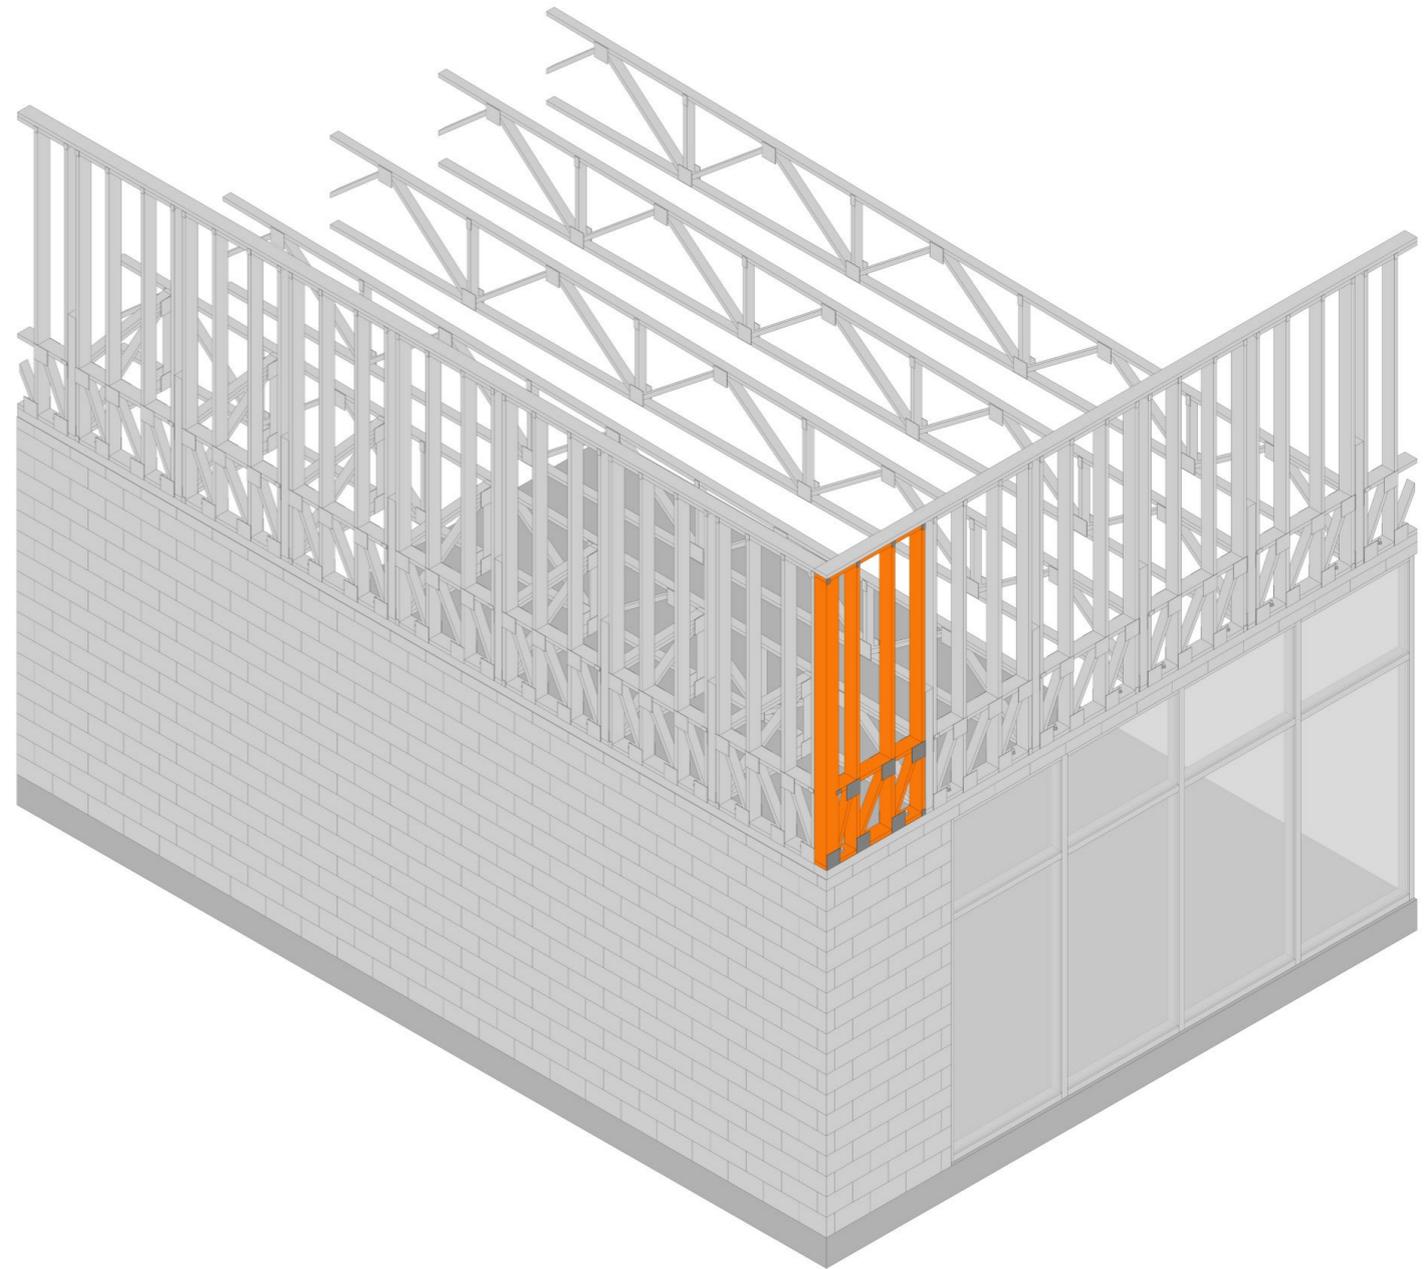

The PSP-C™ serves our system's corner the same way our PSP™ serves the parapet walls between. We didn't make the corner, we made the corner stronger.

- Integrated posting for ultimate high-load corner strength
- Mates to the PAL™, integrated in our G2T-V+™, ends oversized trucking issues
- Reduces field labor (one step, one component)
- Reduces structural connector requirements
- Strongly and Simply affixes using our HSC™ (High Strength Connecting Screws)
- Integral sub-component of our ADS-P™ to create a four-axis, load-resisting sub-system

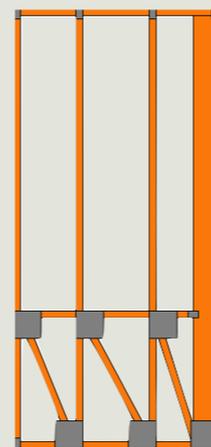

Evolution in Wood-Framed Structure.®
